

PVSTRUCTURES

The car park shade structure that pays for itself

pvstructures.com.au

SOLAR CAR PARK

Solar car park shade structures are the perfect option for retail locations, commercial businesses and industrial sites that can not generate enough power from rooftop solar or where rooftops are not structurally suited to solar panels. In fact, our structures are perfect for any business or commercial location struggling to find space for solar.

Solar car park shade structures are the only commercial shade solution that can provide you with an actual return on your capital investment. PV Structures solar car park shade structures are stand-alone structures that provide a multitude of benefits that include both a physical shade structure to add value to your location and a power generation system that can offset your power costs.

For a guaranteed ROI plus a green energy tick - you can't go past a solar car park shade structure.

LEADERS IN CAR PARK SHADE

We partner with Australian Solar Companies

We partner with Australian solar companies to deliver solar shade structures that maximise returns. Our structures not only add significantly more space to install panels but provide a valuable shade asset for the customer.

All Australian Design & Construction

Our process is completely Australian. We design all our structures in-house; our engineering is done by local firms, and our steel fabrication is all done within Australia. When it comes to installation, we use our experienced and professional inhouse installation teams.

BESPOKE DESIGNS

ALL AUSTRALIAN

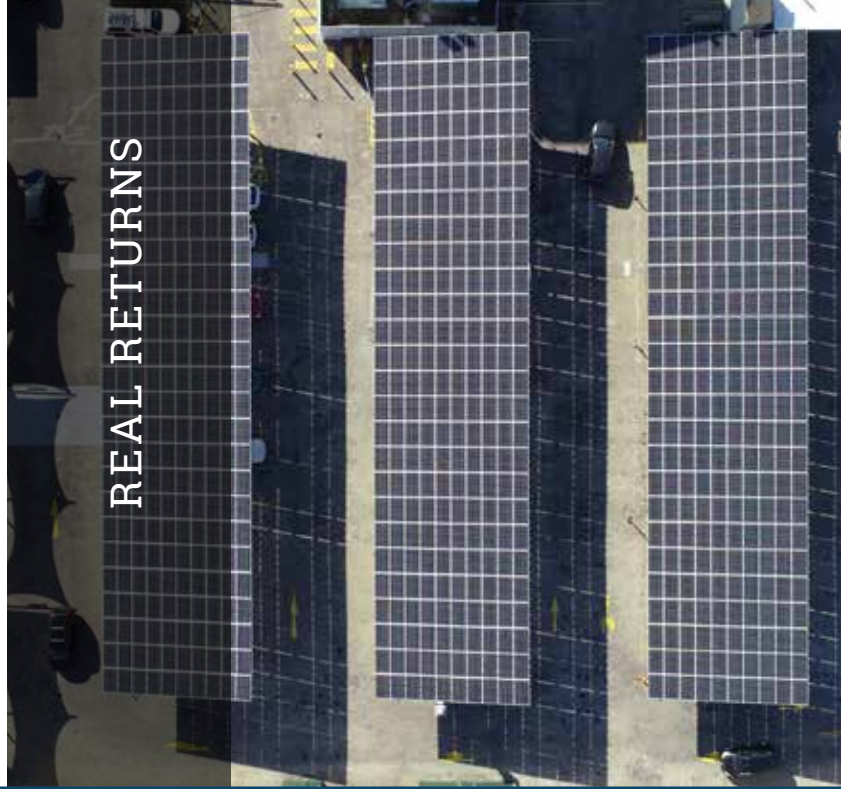

Unparalleled Experience

At PV Structures, we have decades of experience in the design and construction of car park shade structures. Our proven track record includes car park shade projects for Woolworths, Coles, Charter Hall, Vicinity, Hutchinson Builders and many others. We have completed projects across most states in Australia over a span of 15 years.

Commercial Shade with inbuilt ROI

Our shopping centre and commercial shade solutions not only provide the shade you want for your site but a healthy ROI.

Our structures can be installed on both greenfield and retrofit sites using the most efficient profiles in the industry to maximise your returns.

Energy Generation for Years

Solar car park shade structures not only provide shade they can also generate significant power. Our systems can be built as standalone solar systems or can link in with existing rooftop solar setups. Generating approximately 3kW per parking space, our structures make a significant impact on power output costs and will continue to do so for years to come.

Capex, Finance or via PPA

Solar car park shade structures can be financed through your CAPEX budget or financed via a Power Purchasing Agreement (PPA). On the one hand, you make the savings to your power consumption right away; on the other, you lock in an agreed power pricing structure whilst getting a shade structure for free - great value either way. Talk to us to find out more about financing.

SMSA
Shade and Membrane
STRUCTURES | AUSTRALIA

PV Structures is a sister company to Shade and Membrane Structures Australia. SMSA are leaders in car park shade and have pioneered car park solar in Australia. When it comes to traditional shopping centre shade, SMSA are one of the industry leaders, having completed car park shade projects all across Australia. The team at SMSA are some of the most experienced car park shade structure builders in the country.

SMSA has completed projects both in Australia and Internationally and have a reputation for quality, professionalism and scale.

With a portfolio that ranges from simple shade structures through to large bespoke custom structures, SMSA has the experience, skill and dedication to ensure all our projects exceed our clients expectations.

SMSA brings our wealth of experience from design and project management through to construction to PV Structures, to ensure the quality and success of your project.
